NFX-Datasheet

Component :	AutomaticDownload

Version :	3.50	NOF 2/3 ✅	NOF 4/5 ❌

Description : Have you ever wanted to create download pages like the ones that are used on Tucows or at the NetObjects Download pages, where the download of the file starts some seconds after the page has loaded ?
With this Component this is possible in a second ...

Note: Some properties will not be visible when using the Component in NOF 3.x !

Properties	Description
• **File Location :**	This is only needed in NOF 2.x to choose if you want to use an link as download-file or an file which will be published with your files. Choose Remote or Local.
• **File :** (required)	Here you enter the URL of the file you want the user downloads. Use File-Link in the Link-Dialog to provide local files for download.
• **Local File :** (required)	Here you choose the File from your local filesystem you want to provide for download.
• **Nr. of Seconds :**	Here you set the number of seconds after which the file will be started to download. The time starts after the page has been loaded.
• **Use in NAS ? :**	When you use the Component in NAS 3.x set this option to Yes.
