

NFX-Datasheet

Component : **PictureChanger**

Version : **3.51** **NOF 2/3** ☒ **NOF 4/5** ☐

Description : This component is used to insert changing images. The images will be changed after a specified time or only when the page is loaded. You can choose a link for each of the images. The changing of images are often used as sponsor images or for LinkExchange purposes. You can set the order of the displayed images to random or to the order specified by the list of the component.

<u>Properties</u>	<u>Description</u>
• Change Image :	Here you set with which technique the images will be changed. Time-based after a specified time or only once when the page loads
• Set Time (sec.) : (required)	Here you set the time in seconds after which the image will be changed. This property is only available when you use the Time-based image changing.
• Counter Type :	Here you choose the order in which the images will be displayed : Random or the same order like in the component.
• Preload Images :	Do you want to preload all images when the page is loaded ?
• Use in Autoframes	With this property you choose if you want to link to Autoframe-pages. In this case and according to the entered link target some NOF-Autoframe-specific things will be generated.
• Link Target : (optional)	Here you enter the name for the frame or window where the resulting page will be displayed.
• Image Name : (optional)	Here you enter a name with wich this graphic is referenced internally. If left empty a default name is used.
• Alternative Text : (optional)	Here you enter alternative-text which will be displayed if the browser isn't able to load the graphic or if the mousepointer is over the picture.
• Border Width : (optional)	Here you enter the size of the border which will displayed around the graphic. The default value is 0 (no border).
• Image Source :	With this property you choose where the images are located – locally or remotely. When changing this property all Images are removed and have to reentered with the new source.
• Number of Images :	Here you choose the number of images you want to see.
• Image x : (required)	Here you browse to the image you want to use for this component.
• Link x : (optional)	Here you insert the URL which will be shown when the user clicks on this image.
• Stop Rotate on Click:	Should the banner-rotation stop when the banner is clicked ? This option is usefull when the banner is placed in an other frame then the content.
